

ABSTRACT

1 An electrical power connection block housing including a
2 first housing piece and a second housing piece. The
3 first housing piece forms at least a portion of a first
4 exterior side of the block housing. An interior side of
5 the first housing piece has a first slot shaped bus bar
6 mounting area. The second housing piece is connected to
7 the first housing piece. The second housing piece has a
8 portion with a first side located directly opposite the
9 interior side of the first housing piece and a second
10 slot shaped bus bar mounting area on the first side of
11 the second housing piece. The first and second housing
12 pieces form a first bus bar receiving area with the first
13 and second bus bar mounting areas located generally
14 opposite each other on opposite sides of the receiving
15 area for capturing a bus bar therebetween.
